1. **Status:** Receipt is acknowledged of papers submitted July 6, 2004 under reconsideration, which, have been placed of record in the file. Claims 1-9 are pending in this office action.

2. Claims 1-9 are allowed.

3. The following is an examiner's statement of reasons for allowance:

A serial data cursor for extracting content from an analog waveform representing a serial digital data stream has a horizontal length equal to a "word-time" as determined by parameters of a protocol for the serial digital data stream and a clock recovered from the serial digital data stream. The serial data cursor delimits a portion of the analog waveform, which is then decoded into human readable form, such as binary, octal, hexadecimal, alpha-numeric or the like. A trigger may be generated from a specific parameter of the protocol, such as a frame start, so that the serial data cursor initially highlights a first data word of a frame of the serial digital data stream. Alternatively the decoded portion of the analog waveform may be compared to the specific parameter, and the serial data cursor incremented by a "bit-time" until the specific parameter is found in the serial digital data stream.

The cited references of 892's fail to anticipate individually or render obviousness individually or in combination above bold and underlined.
